Forecast Discussion:

- Some light flurries are likely Saturday, but otherwise conditions will be fair, dry and slightly above average in temperature.
- The next week and a half is going to be exceptionally warm, particularly Tuesday, when temperatures could go over the 60-degree mark. It will also be rainy, as the atmosphere is set up to have a train-like pattern of continuous light to moderate showers come up the Ohio Valley from the Gulf of Mexico.
- Temperatures will cool somewhat—while still remaining slightly above average—next weekend.
- The longest range models have an abrupt turn back into colder weather for the end of February and into the beginning of March. Although it looks dry at this point, depending on how much Lake Erie thaws, lake-effect snow MIGHT be possible. Most of the models are suggesting a flip back to mild weather toward Week 3 (the second week of March).

Normals and Almanac——February 17-26

High temperature: 33...35 — Low temperature: 13...14

☀ Sunrise: 7:09—6:55^{a.m.} — 🌇 Sunset: 5:50—6:02^{p.m.} — Daylight: 10^{hr}41^{min}—11^{hr}07^{min} (-2.9^{min}/_{day})
